

WELCOME TO

STONE AGE®

This Book of Stone contains a collection of images from projects completed by the Stone Age team. It showcases the beauty and versatility of stone and the sheer variety available.

Our natural stone and ceramics are imported from across the globe as well as sourced locally in the UK. With over 30 years' experience, we have built an extensive network of specialist suppliers and can source material to your precise specifications. For larger bespoke projects, we can escort clients to a quarry to select first-hand the perfect material.

The Stone Age brand is synonymous with quality and whether it's bespoke stone work you're after or more straightforward flooring for your living spaces, we can advise on the best materials to use and then source, fabricate, finish and install it, all to very exacting standards.

Our in-house design team can work from a simple sketch or architects' drawing. Our state of the art CAD-enabled CNC saws in our Hertfordshire workshop are the most advanced in the UK and allow our master craftsmen to deliver the most complex of projects - from self-supporting stone staircases to the details that turn spaces from ordinary to extraordinary.

We are known for our expert technical knowledge and attention to detail and offer a full turnkey-service, with Project Managers that can take you through the process from start to finish.

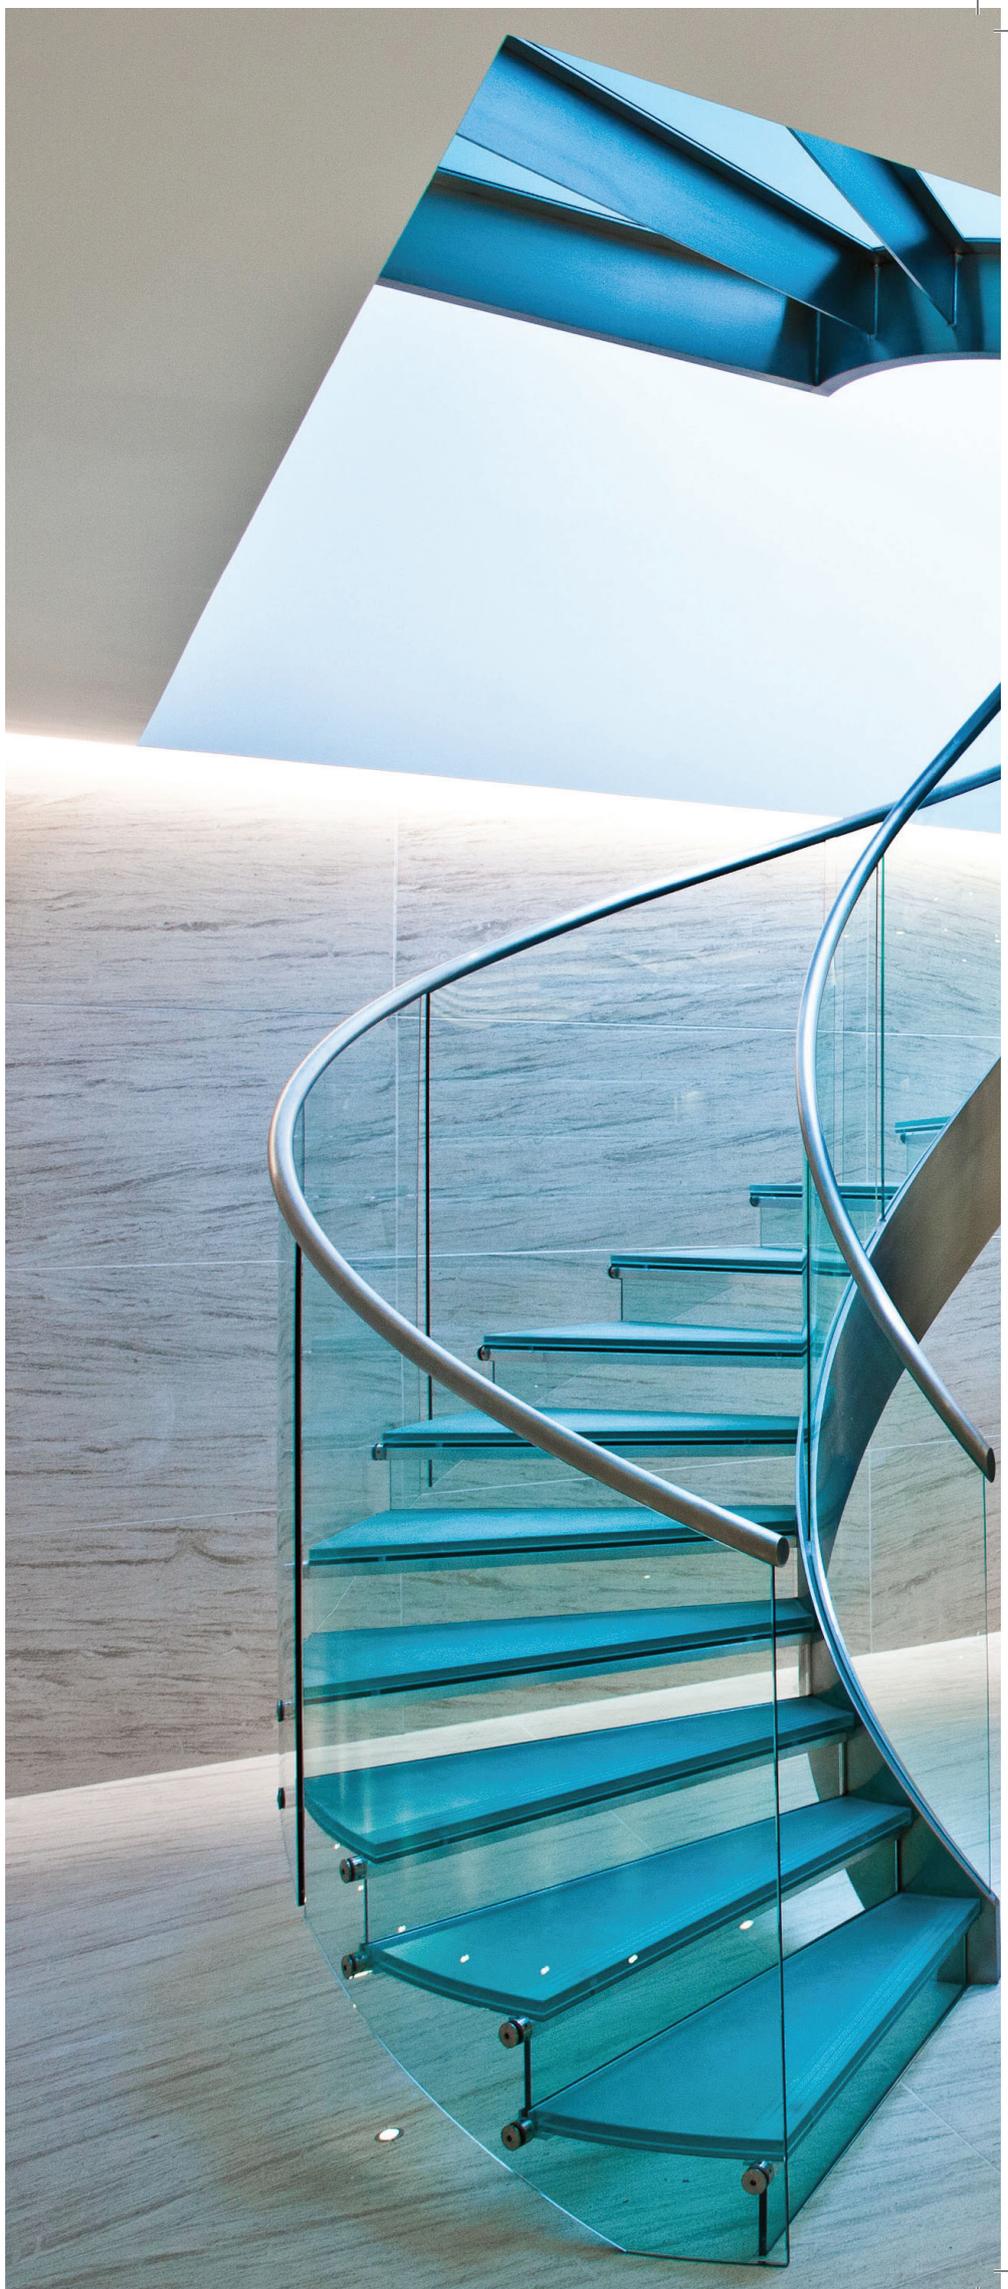

Stone is one of the most durable natural materials and, if worked and treated with understanding and respect, will last for centuries. Stone Age pioneered the pre-drying and treating of stone in the UK and can offer this service pre-delivery, thereby enabling earlier project completion dates. We also offer after-care advice so you get the best out of your stone and it stays as beautiful in the future as it is when installed.

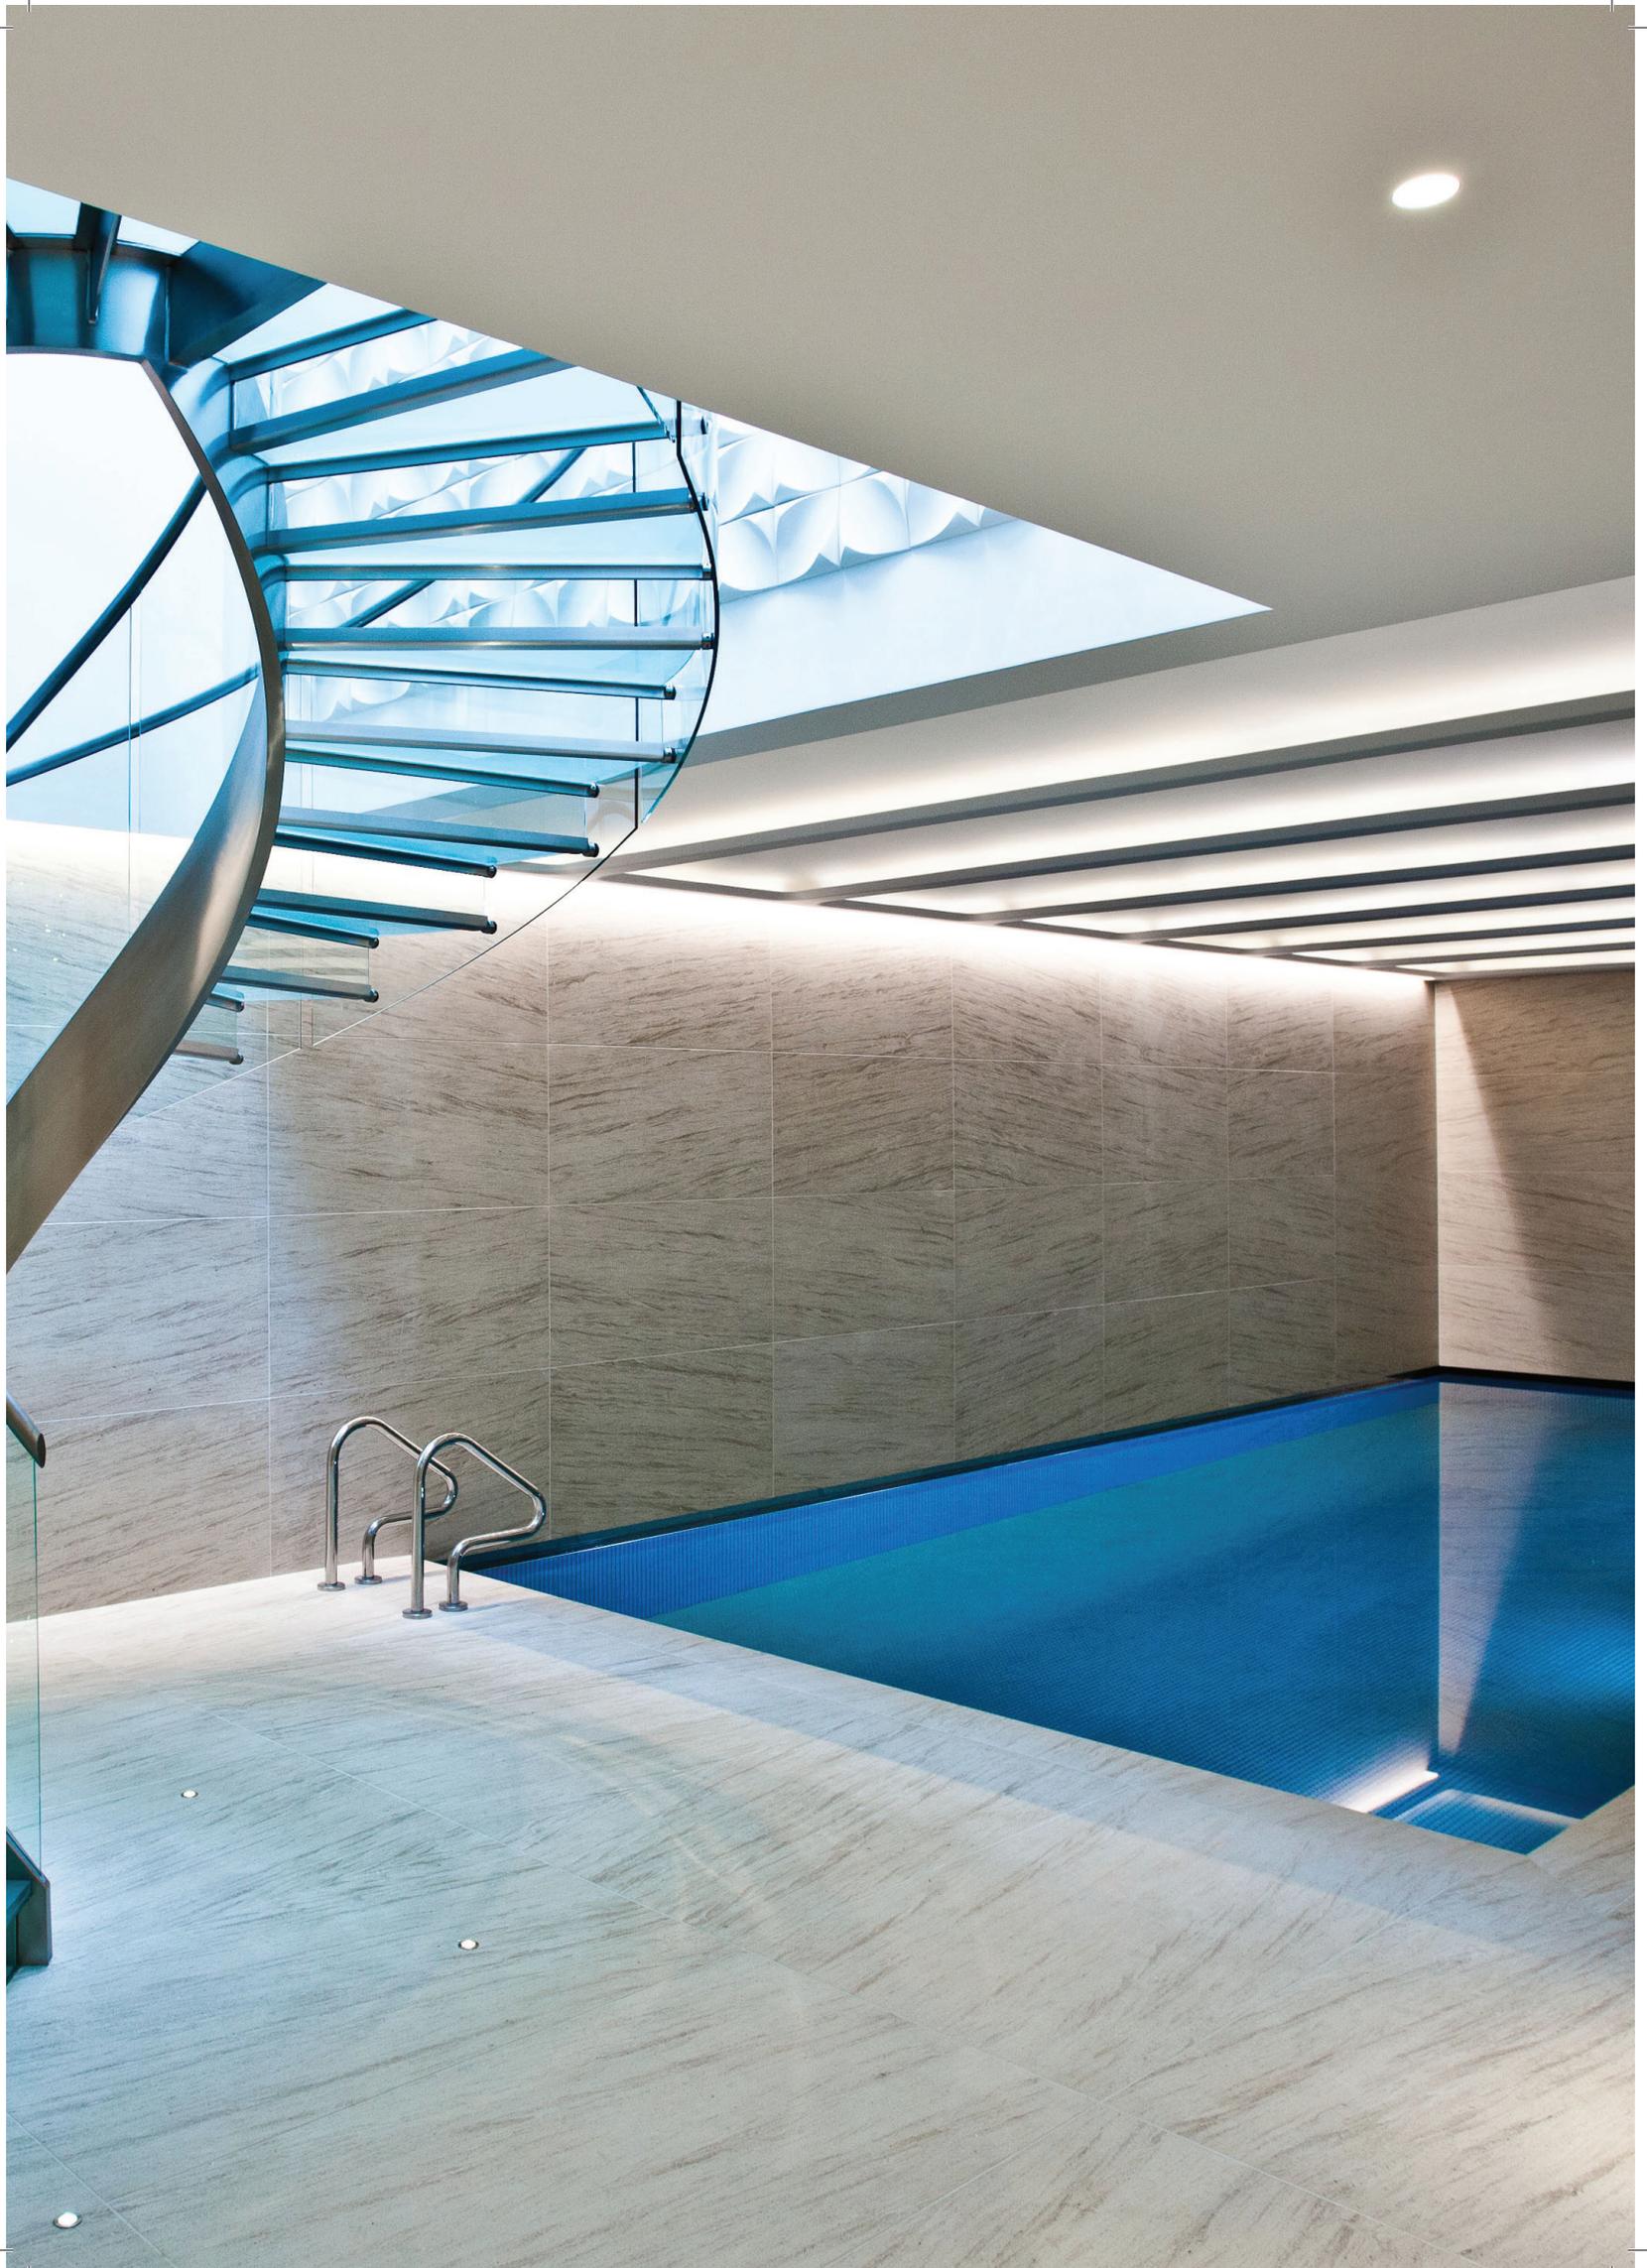

Do come and visit us at one of our Showrooms in London or Bristol or at our Hertfordshire hub where we have a Showroom and our Factory and Workshop.

Challenger Offset is made using 100% ECF (Elemental Chlorine Free) pulp.

Chorus is manufactured to the highest technical and environmental standards. The product is made at Europe's most advanced coated paper mill. Partially integrated, manufacturing paper and pulp on site, therefore reducing energy consumption and carbon output. More than 80% of the total energy consumption of the mill comes from renewable sources - mostly biomass. The mill which makes Chorus sources 90% of its pulp fibre from within a 200km radius of the mill, further reducing the carbon footprint for production.

Emblem Greyboard is a board that is made entirely of recovered paper.
